SUMMARY

Applied and agricultural economist (PhD, expected May 2027) with extensive experience analyzing complex economic data and estimating demand systems using STATA, SAS, R, and Python. Skilled in econometric modeling, data processing at scale, and translating analytical results into clear tables, graphs, and written work product. Seeking a Research Analyst role applying rigorous quantitative analysis to client engagements.

EDUCATION

PhD, Agricultural and Applied Economics — University of Georgia (GPA 3.94) Expected May 2027

Coursework: Statistics for Econometrics, Structural Econometrics, Consumer Demand Theory, Nutrition Policy Analytics, Production Economics

Graduate Certificate, Agricultural Data Science — University of Georgia Dec 2026

Coursework: Applied Regression Analysis, Informatics for Research and Practice, Applied Agricultural Data Science

MS, Agricultural and Applied Economics — University of Georgia (GPA 3.93) May 2022

Coursework: Applied Econometrics, Microeconomics, International Agricultural Trade, Agricultural Development

RESEARCH EXPERIENCE

Demand Estimation & Price Elasticity of Tobacco in Japan | R, Python, SAS Jan 2023 – Present

- Estimated own- and cross-price elasticities across tobacco product categories using a two-stage Almost Ideal Demand System on a nationwide retail scanner panel (~6,000 outlets, 2,196 observations).
- Cleaned and processed large-scale point-of-sale datasets and constructed Törnqvist price indices to isolate genuine price responses from quality-composition shifts.
- Produced elasticity tables and time-series graphs and translated results into policy implications for Japan's proposed tobacco tax equalization.

Generalized Models of Japanese Seafood Demand with Forecast Combination | R Sept 2025 – Present

- Built, tested, and compared generalized ordinary and inverse demand models on 20+ years of Japanese seafood consumption data, including non-nested hypothesis and specification testing.
- Implemented forecast combination techniques (regression-based, eigenvector, and machine-learning weighting) that outperformed individual models in out-of-sample accuracy.

Supply Shock & Price Transmission in Landlocked Economies | R, Python, geoPandas April 2026 – Present

- Investigated the impact of supply chain disruptions on agricultural commodity prices using panel fixed-effects regression.
- Built automated Python web-scraping pipelines to assemble datasets and produced geospatial visualizations with geoPandas.

EXPERIENCE

Graduate Research Assistant — University of Georgia Aug 2022 – May 2026

- Conducted econometric research in time-series analysis of food and agricultural markets under Professor A. Ford Ramsey.
- Conducted research on international development and agriculture under Professor Mateusz Filipinski (2020–2022).

Graduate Teaching Assistant — University of Georgia Aug 2022 – Dec 2023

- Quantitative Methods in Agriculture (STATA, R); Analytical and Computational Tools (Excel) — supported instruction, coding labs, and grading.

SKILLS

Programming & Statistical: STATA, SAS, R, Python, MATLAB, SQL

Libraries & Frameworks: pandas, geoPandas, scikit-learn, dplyr, ggplot2, xtreg

Tools: Git, GitHub, VS Code, Bash, Excel, MySQL

Methods: Demand system estimation, panel & time-series econometrics, forecasting, data visualization, web scraping
